Summary

Full stack developer and CSE graduate from the University of Asia Pacific. I spent four months as a frontend intern at Eutropia IT, and on my own time I build and deploy web apps with React, TypeScript, Node.js, Express and Django. I have built four so far, three of them live, including a note-sharing site for university students and a habit tracker with an AI coach. I am looking for full stack or frontend roles in Dhaka or remote.

Technical Skills

Languages: JavaScript, TypeScript, Python, HTML, CSS, SQL, C/C++
Frontend: React, Vite, Tailwind CSS, React Router, Axios, Leaflet.js, Responsive Design
Backend: Node.js, Express, Django, REST APIs, JWT, Google OAuth
Databases: MongoDB, PostgreSQL, SQLite
Tools & Platform: Git, GitHub, Vercel, PythonAnywhere

Experience

Frontend Developer Intern Feb 2026 – Jun 2026
Eutropia IT Dhaka, Bangladesh

- Built reusable React components for client websites
- Turned Figma designs into responsive pages that work on both mobile and desktop
- Connected pages to backend APIs and took part in team code reviews on Git

Projects

NoteSwap | *Django, Python, JavaScript, PDF.js, PostgreSQL* [Live](#) | [GitHub](#)

- Built a note-sharing site where students upload notes, moderators approve them, and other students rate, comment and follow providers
- Added sign-up with email verification and Google login, and locked accounts after 5 wrong passwords
- Kept uploaded notes private to signed-in users and built a PDF reader with PDF.js that also works on phones

Habit Tracker | *React, Tailwind CSS, Node.js, Express, MongoDB, Gemini API* [GitHub](#)

- Built an ad-free habit tracker for my own use, with daily check-ins, streaks, a 90-day heatmap and weekly stats
- Wrote the backend in Node.js and Express with MongoDB, using JWT login and hashed passwords
- Used the Gemini API for weekly reviews, habit suggestions and a chat about your own progress

Album Finder | *React, Vite, Node.js, Express, Spotify API* [Live](#) | [GitHub](#)

- Built a site that finds any artist and lists their Spotify albums and singles, with filters, sorting and tracklists
- Kept the Spotify API key on the server with a small Express backend hosted on Vercel
- Cached search results for 10 minutes to stay within Spotify's request limits

Orbital | *TypeScript, Vite, Leaflet.js, NASA API, Vercel* [Live](#) | [GitHub](#)

- Built a live map that tracks the International Space Station and updates its position every 4 seconds
- Added a browser for NASA's Astronomy Picture of the Day, going back to 1995
- Wrote a small serverless function that shows who is on board the ISS right now

Education

University of Asia Pacific (UAP) Dhaka, Bangladesh
B.Sc. in Computer Science and Engineering, CGPA 3.60/4.00

- Received the Vice-Chancellor's Award three times and the Dean's Award once

Bangla College Dhaka, Bangladesh
Higher Secondary Certificate (HSC), Science, GPA 5.00/5.00
